

# Kubernetes with Red Hat OpenShift

World Tour

## **Deploy Microservices to Red Hat OpenShift**

David Nugent, Developer Advocate, IBM

Sign up: [ibm.biz/2020feb Openshift](http://ibm.biz/2020feb Openshift)

# Hi, I'm Dave

I'm a developer advocate for IBM in San Francisco. I also help organize:

- The SF JavaScript Meetup
- IBM Developer SF Meetup
- ForwardJS San Francisco && Ottawa

I participate in meetups, hackathons, webinars and write articles about technology for IBM and other organizations.

## Warning: I am a lowly developer

# Agenda

<b>Red Hat + IBM</b>	<b>04</b>	<b>Kubernetes</b>	<b>27</b>
		What Kubernetes Can't Do	31
<b>Orchestration Ecosystem</b>	<b>10</b>	<b>Red Hat OpenShift</b>	<b>32</b>
<b>Why Containers?</b>	<b>13</b>	Red Hat OpenShift 4 vs 3	35
Architectural Overview	14	Red Hat OpenShift 4.2 Release	36
<b>Microservice Architectures</b>	<b>19</b>	<b>Conclusion &amp; Upcoming Events</b>	<b>38</b>
<b>What Is Docker?</b>	<b>22</b>	<b>Q&amp;A</b>	<b>42</b>
Docker Components	24

# ↳ Why Containers?

# Why Containers?

# Containers overview

- Environment isolation
- Demand growth
- New Cloud-Native Apps
- Modernize existing apps
- Dev vs Ops

A standard way to package an application and all its dependencies so that it can be moved between environments and run without changes.

Containers work by isolating the differences between applications inside the container so that everything outside the container can be standardized.

# Containers: Dev vs Ops

Code	Logging
Libraries	Remote Access
Config	Network Config
Runtime	Monitoring
OS	

# Why Containers?

- Agile
- Continuous Deployment
- Separation of Concerns
- Observability
- Consistency
- Management
- Microservices
- Resource Isolation
- Resource Utilization

# Other High-Level Benefits

- Portable
- Easy to manage
- Containers provide “just enough” isolation
- Immutable

# ↳ Microservice Architectures

# Microservices Defined

## Martin Fowler: Microservices

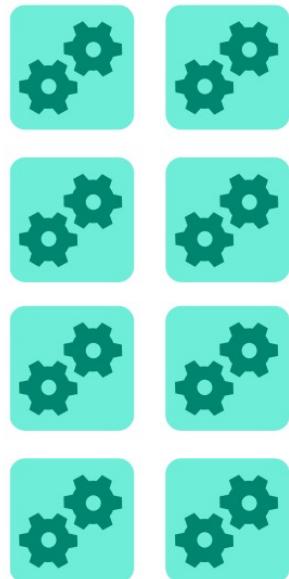

“In short, the microservice architectural style is an approach to developing a single application as a suite of small services, each running in its own process and communicating with lightweight mechanisms, often an HTTP resource API. These services are built around business capabilities and independently deployable by fully automated deployment machinery. There is a bare minimum of centralized management of these services, which may be written in different programming languages and use different data storage technologies. “

# Microservices

Monolithic Application

Break-down into microservices

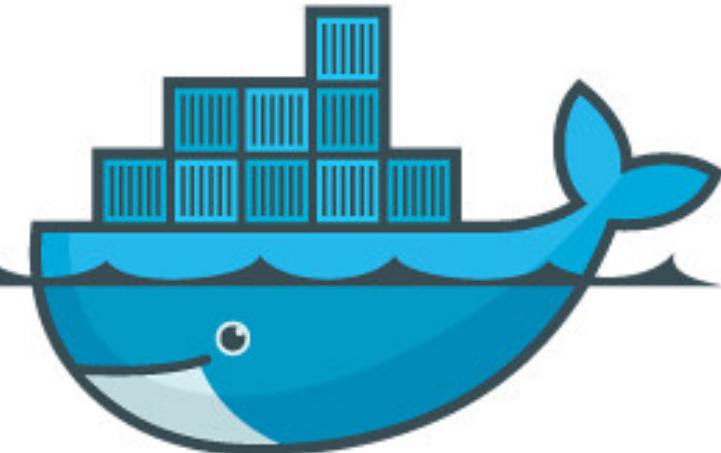

Make each microservice HA

Protect against regional outage

## ↳ Docker Containers

**docker**

# The Gartner Hype Cycle

Docker generated a lot of buzz and \$272M+ in venture capital funding.

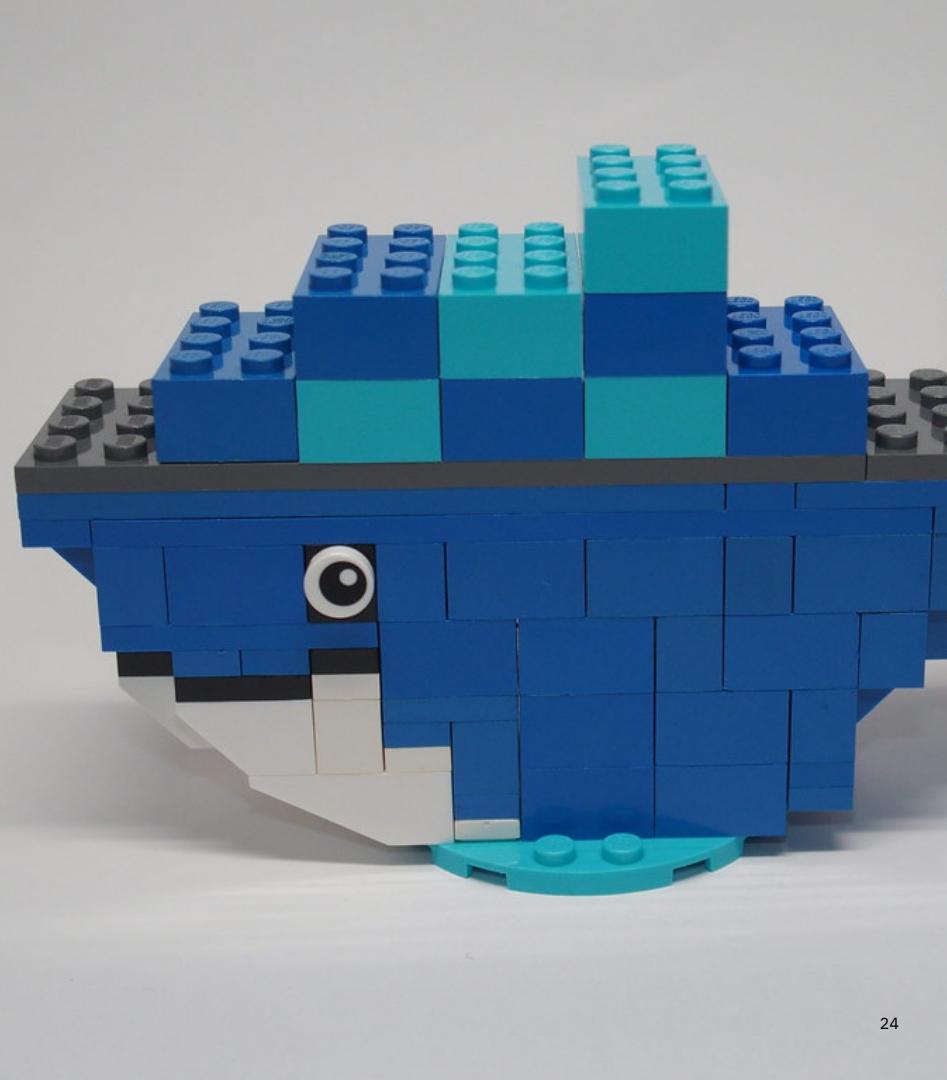

As a technology, containers are still gaining in popularity, especially with enterprises.

With a focus on Kubernetes, what is the future for Docker and Docker, Inc?

# Docker Components

- Docker Engine
  - Manages containers on a host
  - Accepts requests from clients
  - Maps container ports to host ports
- Images
- Docker Client
  - Drives engine
  - Drives “builder” of images
- Docker Registry

# ↳ Orchestration

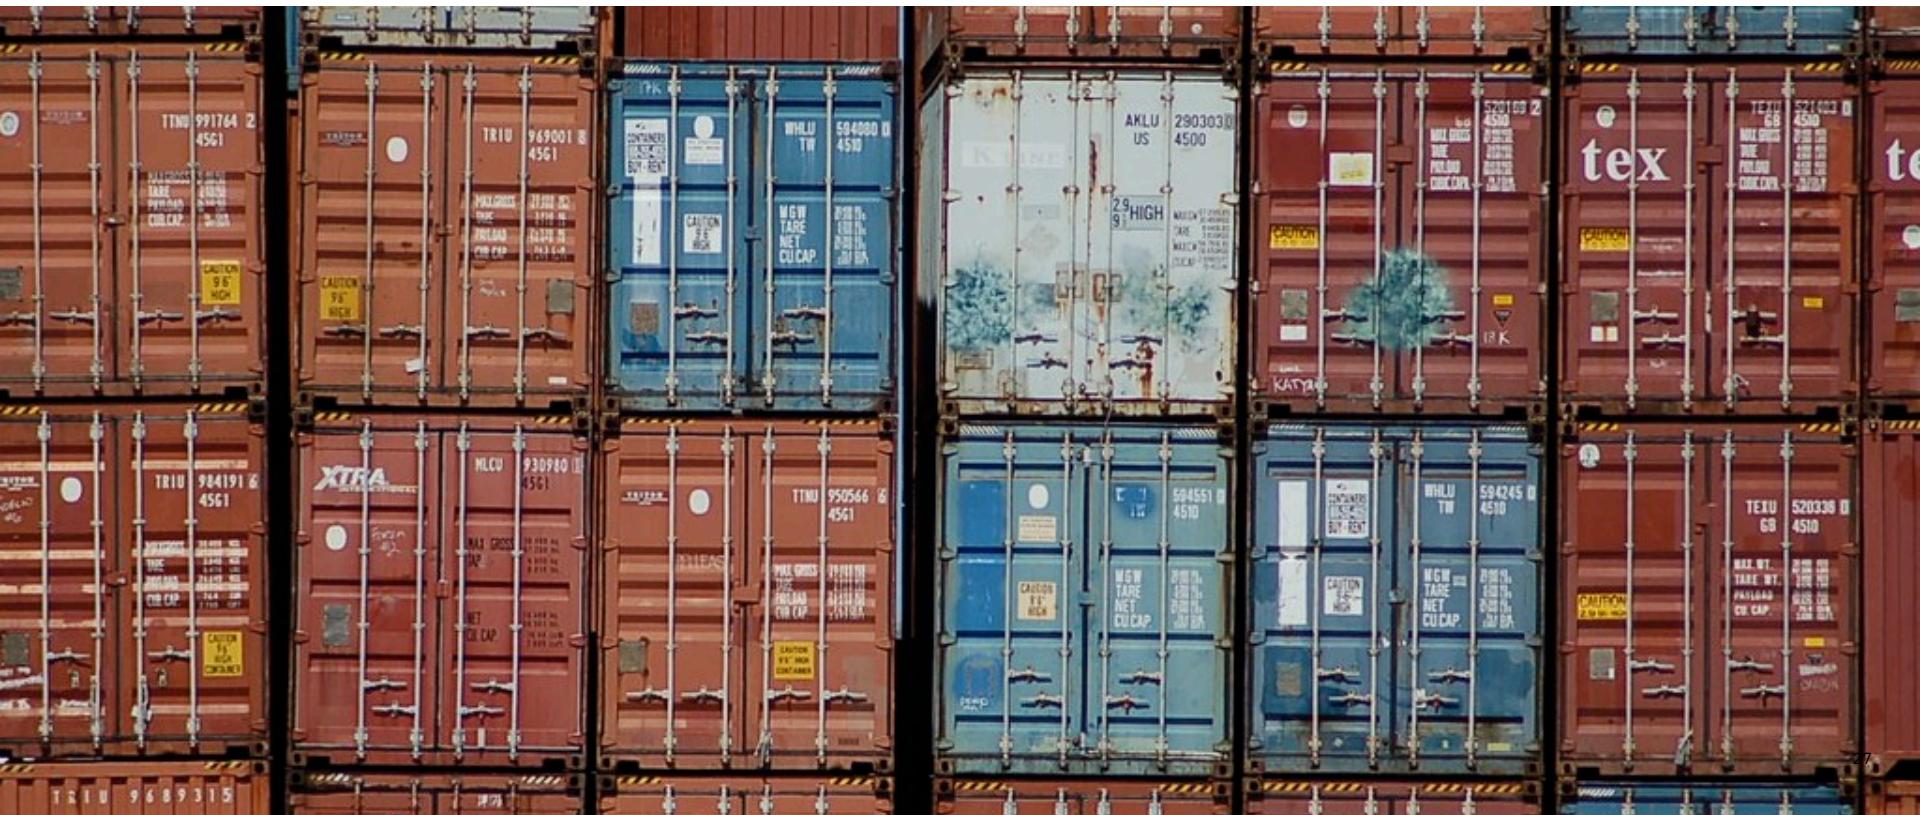

# Orchestration

- Scheduling
- Cluster management
- Service discovery
- Provisioning
- Monitoring
- Configuration management

# ↳ Kubernetes

# kubernetes

# Kubernetes Architecture

# Why Kubernetes?

- Service Discovery
- Storage Orchestration
- Rollouts/Rollbacks
- Automatic Bin Packing
- Self-Healing
- Secret/Config Management

# What Doesn't Kubernetes Do?

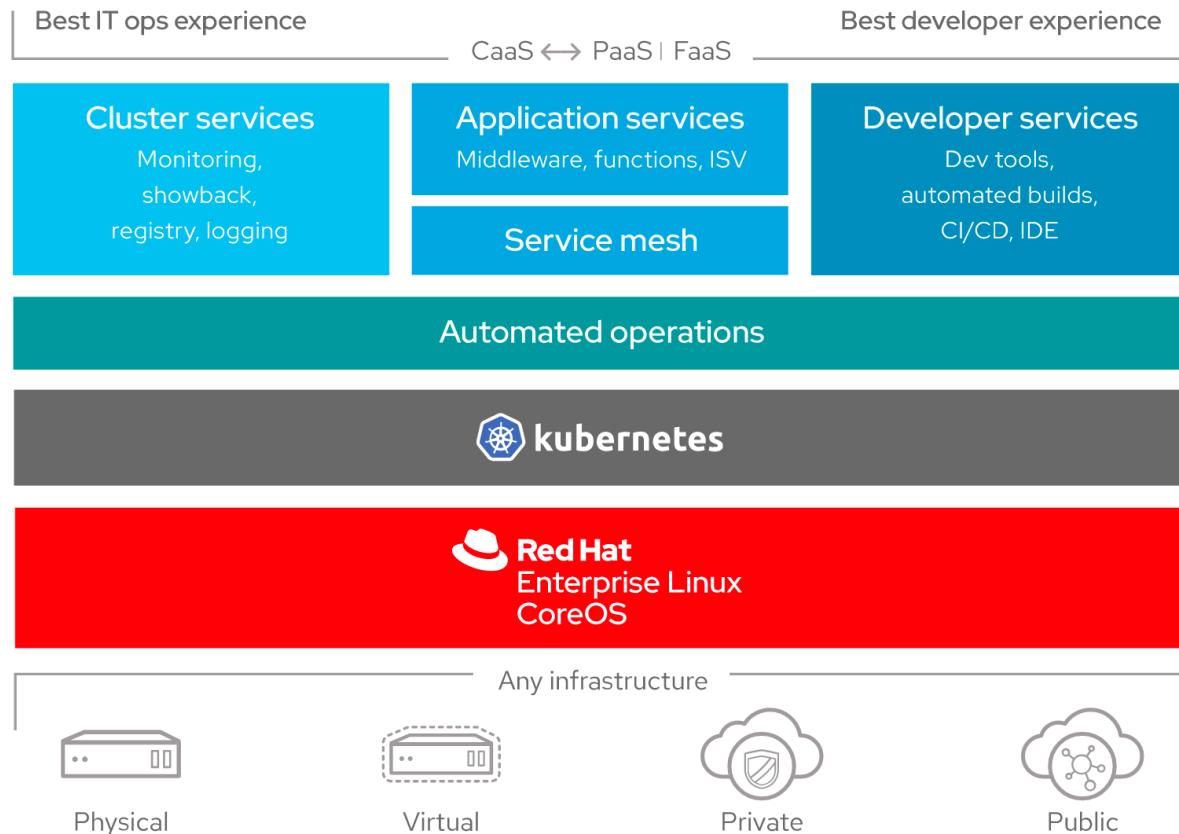

- Define Application Types
- Deploy Code
- Application-Level Services
- Logging/Monitoring/Alerting
- Config
- Machine Management

↳ OpenShift

# ↳ OpenShift Architectural Overview

# OpenShift Overview

- Container Host & Runtime
- Enterprise Kubernetes
- Validated Integrations
- Integrated Container Registry
- Developer Workflows
- Access to Services

# Why OpenShift 4 instead of 3?

- Not Just an Upgrade
- Immutable RHEL CoreOS
- OpenShift Services Mesh
- Operator Framework
- Knative Framework
- CodeReady Containers
- Simplified Update Process

# Red Hat OpenShift 4.2

## released October 16, 2019

<https://blog.openshift.com/introducing-red-hat-openshift-4-2-developers-get-an-expanded-and-improved-toolbox/>

Today Red Hat announces Red Hat OpenShift 4.2 extending its commitment to simplifying and automating the cloud and empowering developers to innovate.

Red Hat OpenShift 4, introduced in May, is the next generation of Red Hat's trusted enterprise Kubernetes platform, reengineered to address the complexity of managing container-based applications in production systems. It is designed as a self-managing platform with automatic software updates and lifecycle management across hybrid cloud environments, built on the trusted foundation of Red Hat Enterprise Linux and Red Hat Enterprise Linux CoreOS.

# OpenShift vs OKD

- OKD (Origin Community Distribution)
- [github.com/openshift/origin](https://github.com/openshift/origin)
- 30,872 commits, 364 contributors

# IBM Partners

Enabling Independent Software Vendors (ISVs)  
and tech companies for growth

## Target audience

- ISVs and tech companies building and selling cloud solutions
- New to IBM Cloud
- Startups who aspire to build and sell their own solutions

### Offers to help you get started

Build with up to \$12,000 of free IBM Cloud™ credits (\$1,000 per month for 12 months)

Integrate your solutions with leading-edge IBM Cloud technologies to deliver more innovation and value to your clients. Access more than **130 unparalleled services** including Watson™, Analytics and Security.

Build with 10TB of IBM Cloud Object Storage at no charge

Build data capability into your offering. IBM Cloud Object Storage is designed for high durability, resiliency and security.

Build with IBM Watson Assistant with a 1-year free trial

Receive access to 100K API calls per month plus 10 workspaces. Build and deploy chatbots quickly and efficiently with IBM Watson Assistant's advanced capabilities and seamless interface.

### Get started

Experience IBM's countless partner benefits. Start building and selling with IBM today.

Learn more and access offers at  
[ibm.com/partners/start](http://ibm.com/partners/start)

Build with IBM Cloud Kubernetes Service with a 1-year free trial

Containerize your solution with 1TB of block storage. Ship all your applications in one agile, well-defined structure with IBM Cloud Kubernetes Service.

Build with IBM Blockchain with a 6-month free trial

Build a network with up to 3 organizations to prototype. Build a secure business transaction network for your clients using blockchain and smart contracts.

Finished building and testing?  
Go-to-market with IBM

Access Provider Workbench, attend an orientation session and join the premier network of over 400 partners who are already listing their solutions on the IBM Marketplace.

Is your business a Startup? Build with up to \$120,000 in IBM Cloud credits

If your business revenue in the last 12 months is less than \$1M and you've been in business for fewer than five years, then you may qualify for Startup with IBM.
